Adjust your Accountdata in UnifiedSettings

This manual describes the process of adjusting data of your account used for LNC Apps. Since LNC Apps provides a UnifiedSettings experience, you may have some features or views missing based on your account. Here we will have a closer look at the experience of updating your account.

Update your information at: <https://apps.lucanoahcaprez.ch/settings>

App Information

Explanation of UnifiedSettings approach

LNC Apps must be understood as a platform that can be dynamically expanded and supplemented. With overarching platform elements, rough guidelines are given and synergies are used to enable the most consistent experience possible. With this platform, new applications can be created dynamically and assigned to specific users. UnifiedSettings is available so that the settings, authorizations and parameters can be managed centrally.

It depends on the identity provider

Our platform should be as open as possible and therefore integrate a lot of third party elements. For user management a lot of IDPs (identity provider) are supported. Since most of the user details are synced from the IDP, the adjustment of account data is limited.

If you use the built in LNC Apps IDP (Sign Up with email to create such an account) you can manage the details like email, passwords and username here. If you use third party identity provider you most likely are only able to update the display name. To adjust parameters like password, email and more, visit the IDPs account settings page.

User Guide

1. **Sign In:** Sign into LNC Apps in your Browser: [Login - LNC APPS \(lucanoahcaprez.ch\)](#).
2. **Open App:** Click on the cogwheel in the header on the top right corner. Alternatively use the direct link: <https://apps.lucanoahcaprez.ch/settings>.
3. **Switch/Scroll to section "Update Accountdata":** If you have multiple permissions you might see more sections. Locate the "Update Accountdata" section and continue.

4. Now you can see all elements that can be updated. If you have third party IDPs you might only see a bunch of elements. When you have a Account from LNC Apps you can edit it here completely.
5. Adjust the elements like you want to (Displayname, Email adress, Password, etc.) and click the "UPDATE" button. If the message is green, it has been adjusted. If it doesn't return green, read the error message and change the elements in the fields above until it is green.
6. **Review adjustments:** When you get a (green) confirmation message, your settings have been saved. You can refresh or logout/login to see that the changes have been applied.
