

Perform user interactions in the system context

Usage of ServiceUI

ServiceUIx64.exe can be used to execute a certain part of a script in the user context, even though you execute the main script in the system context.

```
ServiceUI.exe -process:TSPProgressUI.exe %windir%\sysnative\WindowsPowerShell\v1.0\powershell.exe -  
WindowStyle Hidden -NoProfile -ExecutionPolicy Bypass -nologo -File <scriptpath>
```
